Changes Made

Minh Duc Tong – a1941699

Feedback:

- No details provided regarding the implementation. For final submission please do submit the design sketch and readme file mentioning how to run your code also, no testing (Unit testing, tests for edge cases, integration tests etc.) seems to be done at this stage so please implement that as well.
- Please also add comments in your code to get better points for code quality.

Changes made:

1. I added Readme file as description of the project.
2. I added comments for each functions in each class.
3. I added MainAggregationServer as loadbalancer to handle fault-tolerance and improve performance of aggregation server.
4. I added retry actions for content server and client to retry if it could not connect to aggregation server in first time.
5. I added more unit test cases and integration test cases.
